

# KOBE SARAUSAD

Samamish, WA | kobesarausad@gmail.com | 425-449-3681 | [LinkedIn](#) | [Portfolio](#)

## EDUCATION

---

### University of Washington

Bachelor of Science in Statistics: Data Science | GPA: 3.53/4.00

Seattle, WA

Sep 2019 – Aug 2023

## EXPERIENCE

---

### DoorDash

Sales Analytics (GTM Engineering)

Seattle, WA

Mar 2026 – Present

- Built probability-to-close (P-close) models to help sales prioritize the leads most likely to convert, directing rep time toward the highest-value merchants; shipped baselines in Python on Databricks over Snowflake data
- Automated weekly longtail lead cleaning, replacing a 3–5 hour manual process (120+ hours saved annually), and built a Google Sheets forecasting app on Snowflake so sales teams spend more time selling
- Partner with sales strategy and operations on lead assignment and P-close roadmaps, translating revenue goals into data and automation priorities

### Seattle Mariners

Analyst, Revenue Insights

Seattle, WA

Oct 2022 – Mar 2026

- Built ticket sales and attendance forecasts (Bayesian and XGBoost models accounting for promotions, opponent, and timing) that sales and ticket leadership used to decide which promotions to run on which dates and what to expect at each game
- Created a promotion optimization system (linear programming) to maximize ROI across the 81-game season
- Reduced fan gate wait times by 15% by modeling gate entry with queueing theory and simulation to set staffing and scanner capacity by expected attendance
- Segmented 100K+ fan accounts into engagement tiers using clustering and neural networks, giving sales and marketing a basis for targeting
- Fine-tuned a BERT model on GPU in Azure notebooks to categorize open-text survey comments after every homestand, replacing a manual analyst process (several thousand responses, est. 8+ hours) with a 5-minute run
- Built Power BI dashboards and Python/R automations on SQL Server, Snowflake, and third-party API data, saving 10+ hours weekly

### University of Washington

Data Science Intern

Seattle, WA

Sep 2022 – Aug 2023

- Translated deep learning results into interactive D3.js visualizations for non-technical stakeholders
- Forecast student academic performance with LSTM and transformer models trained on AWS SageMaker, supported by scalable preprocessing pipelines on AWS S3
- Prototyped an LLM-based student chatbot for academic recommendations using AWS Bedrock

## PROJECTS

---

### NBA MVP Prediction | R, NLP, Machine Learning

- Predicted NBA MVP combining season statistics with Reddit sentiment analysis using tidytext; implemented ensemble models with randomForest and XGBoost achieving 85% accuracy

### Projecting Crime Frequency (Datathon 2023) | D3.js, Deep Learning

- Compared LSTM and temporal convolutional networks using TensorFlow/Keras; authored interactive D3.js dashboard visualizing model performance and spatial distribution

### KPI Dashboard (Court1 Consulting) | R Shiny, AWS, API Integration

- Integrated Stripe and Toast APIs with AWS Lambda and S3 for automated ETL pipelines processing hundreds of daily transactions; created R Shiny dashboards with real-time KPI tracking and automated alerts

## SKILLS

---

**Languages:** R, Python, SQL, JavaScript, HTML/CSS

**ML Frameworks:** TensorFlow/Keras, PyTorch, scikit-learn, XGBoost, LightGBM, CatBoost

**Python:** pandas, numpy, scipy, statsmodels, matplotlib, seaborn, PuLP, transformers

**R:** tidyverse, data.table, caret, brms, rstanarm, lme4, shiny, ggplot2

**BI & Tools:** Power BI, Tableau, Google Sheets, Excel, D3.js, Git, Docker, Jupyter, RStudio

**Cloud:** AWS (Lambda, S3, EC2, SageMaker, Bedrock), Azure, Snowflake, Databricks, SQL Server
